

Hugo

Hugo is a wild beast with a temperamental personality.

He can manipulate your signal twisting and bending it to different notes. With a strong signal he will let it pass through only adding a ripping texture and a sub octave. You can control the strength of your signal with the preamp knob. You can also use a fuzz or distortion before Hugo to do the same. Find a sweet spot where you can control Hugo with your playing dynamics or just let it destroy your signal.

Hugo sometimes oscillates and screams. He is not a pet for the faint of heart. You have been warned.

Preamp controls the strength of your signal going into the effect

Volume controls the output of the effect

Tone adjusts the amount of high frequencies

True bypass

9V from an external power supply (no battery option)
