

## Anti-Fuzz

Anti-Fuzz is a vintage inspired pedal with modern functionality. Benderesque typology with a hybrid set of transistors. NOS germanium transistor paired with a silicon one to give the pedal more grit. Full and warm sound with good attack.

Pedal cleans up from your guitar's volume pot when fuzz control is backed off. Dime the fuzz control to increase the highs. Works well with both clean and driven amps.

Internal power inverter to allow use with modern power supplies.

**Volume** controls the output of the circuit.

**Fuzz** controls the amount of gain.

True bypass

9V from an external power supply (no battery option)

Please use a good quality isolated power supply.

Handmade in Tampere, Finland
